

Please reject the NAB's petition 04-160. I travel to large cities where XM radio has made available current weather and traffic conditions. I am not familiar with local radio stations in these large markets and do not wish to turn off XM Radio just so that I can hear the current conditions I require. Something similar happened when large east and west coast networks (ABC, NBC AND CBS) were removed from the satellite network where I subscribe to television programming. Please do not let this happen again in the radio market!

I should not be held hostage to inadequate local programming when cutting edge technology offers a superior service like XM Instant Traffic & Weather.

Do not take away my right to choose and enjoy the freedoms protected by the First Amendment. I want my XM Satellite Radio!

Sincerely,

Marcia Below
